

Remote fX

The Remote fX of the Fazua evation product family is fully integrated into the frame and thus literally wmerges with the bike.

This makes eBikes with Fazua drive look even more elegant and natural.

Superfluous cables in the cockpit as well as displays that would be exposed during falls or assembly work are a thing of the past with the Remote fX.

The rider can intuitively switch between the support levels with the sensitive touch interface and thus forward the commands to the motor without any noticeable delay.

Battery level and system health information can be quickly read off the five LEDs located on the side without any risk of distracting the rider.

An intelligent light sensor also ensures that the brightness of the LEDs is adapted to the external circumstances.

- › Fully integrated into frame
- › Display of battery level and system health via LEDs
- › Bluetooth-enabled (can be coupled with App, if needed for more information in the cockpit)
- › Intelligent light sensor adjusts LED brightness to external circumstances
- › Intuitive operation via responsive touch interface
